

BRAC UNIVERSITY
Department of Computer Science and Engineering

Set: A

Examination: Mid Semester Exam Duration: 1 Hour

Semester :Summer 2022

Full Marks: 30

Answer the following questions.

Figures in the right margin indicate marks.

CSE 221: Algorithms

Name: ID: Section:

1.	a. CO7	Calculate the time complexity of the following function: worstCase(n): int i, j, k, a, b, sum for (i = 0; i < n; i = i + 3) for (j = n; j >= 1; j = j / 5) for (k = 1; k <= n; k = k * 5) sum = a + b	5																																										
	b. CO7	Calculate the time complexity of the following recurrence relation. [Any method is acceptable as long as steps are shown] $T(n) = 2T(n/4) + \blacksquare$	5																																										
2.	<p>Renowned Progressive Rock band ‘Porcupine Tree’ released an album called 'Closure/Continuation' after about 13 years. Now as a Progressive Rock Music fan you are going to listen to the tracks of the album but in the order of their Youtube views (highest one at first, lowest one at last) instead of the order of the album tracklist.</p> <p>You have chosen an Algorithm to order them as per your preference. If multiple tracks have the same views, you are going to listen to any of them the Algorithm puts first in the list after ordering. This algorithm also solves your concern about the issues regarding space that your device is facing. Porcupine Tree made the fans wait for 13 years for a new album and so you think you have the patience to wait as much time as the Algorithm may take to order the tracks.</p> <p><u>The following table contains the list of the tracks and their Youtube views (in thousand) :</u></p> <table><tr><th>Track</th><th>Harridan Of The</th><th>Rats</th><th>Dignity Herd</th><th>Walk the</th><th>Chimera's</th><th>Population</th></tr><tr><td>New Day</td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Return</td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Culling</td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Plank</td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>Wreck</td><td></td><td></td><td></td><td></td><td></td><td></td></tr></table>		Track	Harridan Of The	Rats	Dignity Herd	Walk the	Chimera's	Population	New Day							Return							Culling							Plank							Wreck

a. CO2	Specify the name of the algorithm you have chosen and simulate the Algorithm to order the tracks of the album as per your preference. Show your workings in detail.		7
b. CO5	Suppose you want to run the algorithm again on the ordered list. Determine the run-time complexity of the algorithm in this scenario.		3

3.	Consider the graph shown below:		
	Bill says he has found a valid mathematical equation while running DFS from the node denoted by '('. According to him, the equation is:	$(6 \div 2) + 5 = 8$	

a.
CO3

Compute the number of edges this DFS tree (of the equation) contains. 1

b.
CO3

c.
CO2

Is what Bill said right i.e is the equation achievable DFS from the node denoted by '(' by running such a DFS?

5

Validate it by showing steps. (Neighbor/Edge selection should be done according to the necessity of the verification process)

Classify the edges of the graph into tree edge, back edge and forward edge while running

4

	a. CO2	<p>Specify the name of the algorithm you have chosen and simulate the Algorithm to order the tracks of the album as per your preference. Show your workings in detail.</p>	7																						

	b. CO5	Suppose you want to run the algorithm again on the ordered list. Determine the run-time complexity of the algorithm in this scenario.	3

3 .		Bill has this weird characteristic of playing with different types of graphs. This time he comes up with an undirected simple graph of 10 nodes. Nodes are labeled from 3 to 12. Some of the edges are: (5,6), (5,10), (6,11), (7,11). He created other edges following two rules. a. All the nodes that are labeled with a number which is a multiple of 3 have edges among them. b. All the nodes that are labeled with a number which is a multiple of 4 have edges among them.	
	a. CO3	Draw the graph to show all the edges.	1
	b. CO3	Bill says, there are at least four triangles in the graph. Do you agree? Support your answer by showing the nodes which form these triangles.	2
	c. CO2	Simulate a BFS algorithm on the graph to find the shortest distance from Node 3 to all others nodes.	6
	d. CO3	Bill told you to keep on adding edges between the nodes according to your wish, keeping the graph simple (without adding multiple edges between any two nodes, self edges). Compute the number of more edges that you can add.	1
